Rotaract Club of Xiamen University Malaysia

Rotary Club of Kuala Lumpur Dynamics

Rotary Club of Tun Razak Exchange

SDC Hackathon

Technical Tools Declaration

Hosted by Xiamen University Malaysia (XMUM) AI Club
Submission Deadline: 25 October 2026

Instructions: Declare every API, cloud service, AI tool, dataset, model, and sponsor resource your team used to build the project. Complete every section; where a category does not apply, tick "No" or write "None" – do not leave it blank. Submit as a single PDF document named "SDC2026_TeamName_TechDeclaration.pdf" together with your project submission. Undeclared third-party resources discovered at judging may affect your score or eligibility.

SDC HACKATHON 2026

Technical & Tools Declaration

Hosted by Xiamen University Malaysia (XMUM) AI Club

Submission Deadline: [Insert date]

Instructions: Declare every API, cloud service, AI tool, dataset, model, and sponsor resource your team used to build the project. Complete every section; where a category does not apply, tick "No" or write "None" – do not leave it blank. Submit as a single PDF document named "SDC2026_TeamName_TechDeclaration.pdf" together with your project submission. Undeclared third-party resources discovered at judging may affect your score or eligibility.

1. Team & Project Overview

Team Name	I Forget
Project / Solution Name	ORO AI
Name (Leader)	Wong Zhong Jie
Email & Phone (Leader)	jiewongzhong@gmail.com, 017-812-2883
University Affiliation(s)	Asia Pacific University of Technology & Innovation (APU)
Live Prototype URL	https://oro-ai.replit.app
Code Repository URL (public / access granted to judges)	https://github.com/firdieadham1108-bot/ORO-AI

2. Architecture & Technology Stack

2.1 System Architecture Overview

Describe how the components declared in this document connect end-to-end (e.g., user interface → backend → AI model/API → database → cloud hosting). Attach a system block diagram as an appendix if available.

[Maximum 200 words]

Users enter a customer request in a responsive React/TypeScript web interface hosted on Replit. A Node/Express backend validates API inputs with Zod, parses supported English/Malay/Manglish/Chinese enquiry patterns using deterministic rules, and retrieves catalogue prices and synthetic employee-capacity data from SQLite. Mock Orbyte People, eLeave and Work adapters expose qualifications, approved leave and jobs. Rules calculate the quotation, detect overlapping work, recommend crew/date options and require manager approval. Confirmations are rechecked within SQLite transactions; outcomes and audit records are saved. A simulated leave event can flag a confirmed appointment At Risk and propose a manager-approved replacement.

Optional browser speech recognition may turn spoken words into editable text, depending on browser support. External OpenAI speech transcription code exists but currently lacks configured credentials. No live LLM extraction, live Orbyte API, live payment integration or production WhatsApp connection is used. The app's SQLite data is not guaranteed to persist through redeployment. Replit hosts the prototype; GitHub stores source code.

2.2 Languages, Frameworks & Libraries

List the main programming languages, frameworks, and third-party libraries that your team did not create. Open-source use is permitted provided it is declared and properly licensed/attributed.

Name & Version	Purpose in Project	License
React 19.1; Vite 7	Frontend framework and build	MIT
Tailwind CSS 4.1	Responsive UI and styling	MIT
Node.js 24; Express 5	Backend runtime / HTTP API	MIT
TypeScript 5.9; Zod 3	Typing / API validation	Apache-2.0 / MIT

Name & Version	Purpose in Project	License
TanStack Query; Lucide	Fetching and UI icons	MIT / ISC
pnpm; SQLite	Workspaces and data store	MIT / public domain

3. APIs & Cloud Services

3.1 External APIs

List every external API your solution calls (GenAI, maps, payments, messaging, data feeds, etc.). Do not include API keys or secrets in this document.

API & Provider	Purpose in Project	Access Tier (free / paid / sponsor-provided)
-	No external third-party API is required for the current demonstration.	-

3.2 Cloud Platforms & Deployment

List every cloud service used for hosting, storage, databases, authentication, or compute, and indicate how the prototype is deployed.

Service & Provider	Purpose in Project	Plan / Region
Replit (sponsored)	Development and Node/web hosting; compulsory	Core US$20 plan; redemption/region TBC
GitHub	Source repository and commit history	-
SQLite local file	Prototype persistence within Replit	Local app storage; not separately hosted

4. AI Tools, Models & Datasets

4.1 AI Models Used in the Solution

List every AI model embedded in or called by your application, including pre-trained, fine-tuned, and self-trained models.

Model & Version	Source / Provider	Usage (pre-trained / fine-tuned / self-trained)	License / Terms
-			

4.2 Datasets

List all datasets used for training, fine-tuning, evaluation, or in the running application. State clearly if a dataset contains personal or sensitive data.

Dataset Name	Source / URL	Type (public / private / self-collected / synthetic)	License	Personal Data? (Y/N)
Replit Agent	Internal seed.ts	Synthetic / team-created	Team-created	N
Quotation scenarios	Test fixtures	Synthetic / team-created	Team-created	N
Sample voice note	Team demo audio	Synthetic / team-created	Team-created	N

4.3 AI-Assisted Development Tools

Tools used to help write code, design, content, or documentation (e.g., chat assistants, code completion tools, image generators). Declaring these tools does not reduce your score; undeclared use may.

Did your team use any generative-AI tool to help create code, design, text, or other project material?

☑ Yes ☐ No

If yes, list them below:

Tool & Version	**Used For**	**Extent of Use (minor / moderate / major)**
Replit Agent	Coding, Assisted UI/backend development and repository commits	Major
Gemini 4 Argon	Code assistance and review	Moderate
ChatGPT 6.1 SOl	Planning, analysis, review and documentation	Major

Briefly describe how your team reviewed, tested, and took responsibility for AI-generated output:

[Maximum 100 words]

AI coding assistants supported planning, implementation and documentation. Team members reviewed the generated code, checked the business rules against synthetic employee and quotation scenarios, and ran backend tests. The latest Replit workspace audit reports 44 passing tests (0 failures), but it has not been tied to the latest GitHub commit and the published browser flow remains unverified. Results must not be presented as proof of production reliability. Team members remain responsible for code quality, copyright, security, truthful AI disclosures and the final submission.

5. Sponsor-Provided Resources

Declare any official SDC sponsor-provided GenAI API, cloud credits, tools, mentoring, or data that your team used.

Did your project use any official SDC sponsor-provided resource?

☑ Yes ☐ No

If yes, list them below:

Sponsor	**Resource (API / credits / platform / data)**	**How It Was Used in the Project**
Alphared	Replit Core	used for web/API development and deployment

Was the sponsor resource essential to the core functionality of the prototype, or could it be replaced? Explain briefly:

[Maximum 100 words]

Replit Core (US$20 plan) is the event's compulsory sponsor-provided development and hosting resource; our team uses Replit to build and deploy the prototype. Replit is required for hackathon participation, although the underlying web app could technically be hosted elsewhere with configuration changes.

6. Security, Privacy & Responsible Use

6.1 Data Handling & Privacy

What user or personal data does your application collect, store, or send to third-party services (including AI APIs)? How is it protected, and how long is it kept? State "No user data is collected" if applicable.

[Maximum 150 words]

Only fictional business, employee, customer and scheduling records should be entered in the demonstration. The app can store typed enquiry contents, quotations, staff assignments, simulated role labels and activity records in a SQLite file hosted with the Replit deployment. Users could nevertheless enter personal details inadvertently; real customer information must not be used for this demo. Reset Demo State clears/restores the synthetic dataset. Storage across redeployments and a formal retention/deletion policy are not guaranteed. Browser microphone recognition may use browser-vendor speech services under their terms. External OpenAI audio upload transcription is not currently configured. API secrets should be kept in Replit Secrets and excluded from Git; repository secret scanning and access controls must be verified before publishing.

6.2 Known Limitations & Risks

Identify the main technical limitations of your AI components (e.g., hallucination, bias, rate limits, dependency on a single provider) and any mitigation you have implemented.

[Maximum 150 words]

The core text parser is rule-based rather than a general-purpose AI model; unfamiliar wording or multiple services may be misread. Browser speech recognition varies by device and permission; uploaded audio currently falls back to a labelled simulated transcript, not a genuine transcription of arbitrary files. Scheduling assumes fixed 09:00-17:00 weekday visits and simplified skills, omitting travel time and public holidays. Risk alerts are triggered by the built-in leave simulation, not a live data listener. An edited enquiry may retain stale analysis until explicitly re-analysed. Demo role selection is not real authentication, and SQLite may not survive redeployment. Mitigations include missing-field prompts, explicit simulation labels, manager approval, transaction-level capacity rechecks and tests. Stale-analysis and access/persistence gaps remain before production use.

7. Compliance & Readiness Checklist

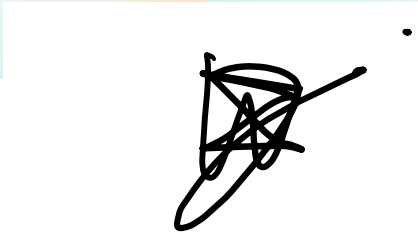

Tick all boxes that apply before submitting.

- ☑ All APIs, cloud services, AI tools, models, and datasets used in the project are declared in this document.
- ☑ All third-party code, datasets, and models are used in accordance with their licenses, and attribution is provided where required.
- ☑ No API keys, passwords, or other credentials are exposed in the code repository, prototype, or this document.
- ☑ Any use of generative-AI tools for development has been disclosed and reviewed by the team.
- ☑ Any use of official SDC sponsor resources has been declared in Section 5.
- ☑ The prototype described here is accessible to judges through the links provided in Section 1.
- ☑ All fields in this template have been completed within the word limits stated.

8. Declaration

By submitting this document, the team leader confirms that the information provided is complete and accurate to the best of the team's knowledge, and that every API, cloud service, AI tool, dataset, model, and sponsor resource used in the project has been declared.
